- Tolerance - tooth decay is safely combated

Gentle protection for small teeth

elaboro® TINY TRUST

High quality pediatric crowns, Made in Germany

If a primary tooth is severely damaged and can no longer be preserved with a conventional filling, the elaboro® TINY TRUST range offers the ideal solution: high-quality, all-ceramic pediatric crowns in a natural tooth color. They effectively protect the primary tooth, secure the space for the next tooth and prevent misaligned teeth - for a healthy smile and a carefree childhood.

TINY TRUST - for the most beautiful smile.

Thanks to finely tuned dental shades and the lithium silicate glass-ceramic surface, the thin ceramic crowns have a lifelike appearance and reliably prevent dark tooth residues from shining through.

Naturally beautiful

Biocompatible

Stable & Sustainable

Personalized

TINY TRUST - for more stability and flexibility.

The multi-layer structure with a stable zirconium oxide core and functional lithium silicate surface guarantees high load-bearing capacity with minimal abrasion on the opposing tooth.

elaboro® TINY TRUST

Outstanding premium quality

While health insurance companies usually only cover the costs of simple standard steel crowns, elaboro® TINY TRUST crowns impress with their superior aesthetics, outstanding functionality and maximum compatibility. Parents in particular, who attach great importance to a natural look, consciously choose this innovative premium product made of high-quality zirconium oxide.

TINY TRUST - for a more active childhood

Restore your kids' confidence, enabling them to engage more actively in daily activities like eating, playing, and socializing comfortably without the fear of standing out.

elaboro® TINY TRUST

This pediatric crown is the best for your child

Maximum biocompatibility and excellent compatibility

TINY TRUST children's crowns are completely free of Metal, hypoallergenic and biocompatible - for maximum safety and optimum wearing comfort.

TINY TRUST - for a more personalized style

Crown rims and cusps can be adjusted precisely and easily with water-cooled diamonds. The internal structure guarantees dimensional stability.
